

Evolution of galaxy dynamics over the last 10 Gyrs with MUSE/VLT

l'Observatoire
de Paris

Author: Mercier Wilfried
Supervisor: CONTINI Thierry
Co-Supervisor: Epinat Benoit

June 9, 2019

IFS:

- ▷ 3D cubes (2D spatial + 1D spectral)
- ▷ photometry + kinematics

MUSE:

- ▷ $1 \times 1 \text{ arcmin}^2$ FoV
- ▷ 0.2 arcsec spatial sampling
- ▷ spectral range [4650 Å, 9300 Å]
- ▷ seeing or AO observations

MUSE instrument. Credit: Ghaouti Hansali (CRAL)

Checking a couple of parameters

Half-light radius

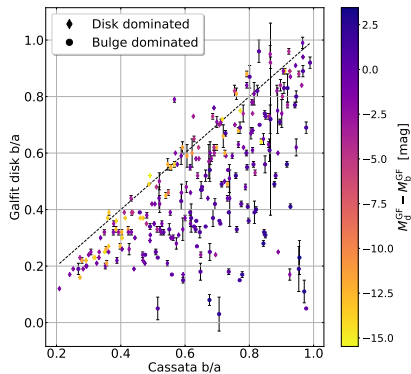

spheroidal disk-like irregulars

Checking a few parameters

Ellipticity

▷ values are consistent between catalogues

▷ scatter is due to bulge dominated (spherically symmetric) systems

Characteristics of our sample

Redshift distribution

- ▷ sample of **103 galaxies** with $R_{1/2} > 0.35''$ and $\text{SNR} > 5$
- ▷ we loose galaxies at $z \approx 1.4$
- ▷ redshift distribution is not drastically changed

Characteristics of our sample

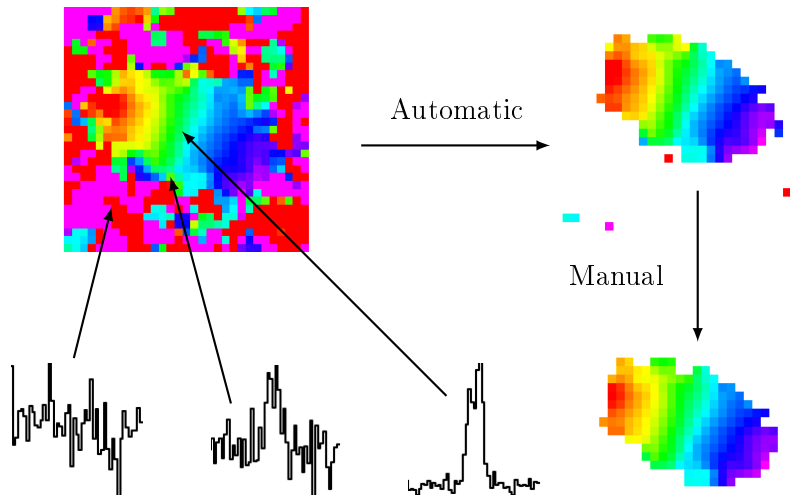

Mass-SFR relation

- ▷ we recover the main sequence
- ▷ massive quiescent galaxies are lost
- ▷ redshift correction from [paper] does not improve the scatter

Kinematical modelling

Cleaning galaxies

Kinematical modelling

Fitting a model

First results

V_{max}/σ_v distribution

Warning

You can ignore this slide if you're **not** working with Overleaf.

Overleaf, Beamer and Biber do not always get along well together. For this reason, if you make a mistake while writing this presentation, in the drop-down error message you'll **always** get Biber-related error messages.

Luckily, you just have to click on “**go to first error/warning**” and the UI will scroll to the line containing your mistake.

Warning

You can ignore this slide if you **are** working with Overleaf.

To compile this deck you'll need the **biber** package. Probably your T_EXeditor already supports it; if not, you will easily find online the instructions to install it.

If you're not using an editor, you can compile this presentation using the command line by running:

```
$ pdflatex main.tex  
$ biber main.bcf  
$ pdflatex main.tex  
$ pdflatex main.tex
```

For this template we defined four colors, following the graphic profile of Umeå University:

UmUBlue

UmUGreen

UmUPink

UmUGold

You can use these colors as you want in your presentation. For example, you can **color the text in gold** by writing `\{UmUGold\}{my gold text}`.

We also redefined many of the most common L^AT_EX and Beamer commands, like `itemize`, `block`, etc. You will see samples of these commands in the following slides.

This is a page with a title and a subtitle

And also some blocks.

Goal of the mission

Shoot in the Death Star's exhaust port and destroy it before it can fire on the Rebel base.

Take care!

TIE Fighters may chase you while approaching the target.

Use the force you must

Remember your training with Obi-Wan, and use the Force to make the perfect shot.

This is an example of **description**.

Luke No. No! That's not true! **That's impossible!**

This is an example of **description**.

Vader *I am* your father.

Luke No. No! That's not true! **That's impossible!**

This is an example of **description**.

Vader *I am* your father.

Luke No. No! That's not true! **That's impossible!**

And while we're here, let's have a look to **verbatim** as well, to see how we made items appear in arbitrary order:

```
\begin{description}  
  \item<2->[This is the first item] one  
  \item<1->[This is the second item] two  
\end{description}
```

A formula will look like this:

$$x^2 + y^2 = z^2$$

You can number equations as well:

$$1 + 1 = 2 \tag{1}$$

$$1 + 1 = 2 \tag{custom label!}$$

If you want to use the default L^AT_EX math fonts, just go to `beamerfontthemeumu.sty` and uncomment the line containing `\usefonttheme[onlymath]{serif}`.

The usual theorem, corollary, definition, definitions, fact, example and examples blocks are available as well.

Theorem

There exists an infinite set.

Proof.

This follows from the axiom of infinity. □

Example (Natural Numbers)

The set of natural numbers is infinite.

Here we display examples of `abstract`, `verse`, `quotation`, and `quote`.

Abstract

This is an abstract.

This is a verse.

This is a quotation.

-Han Solo

A quote this is.

-Yoda

You can cite an article

normally using `\cite`, e.g.: **(article1)**

or display the full citation using `\fullcite`, e.g.: **article1**

*(n.d.) stands for "no date". year={A long time ago...}
is not a date that can be specified in bibliography anyway.*

Look at the code of the following slide to see how to automatically split the bibliography on many slides. You can also use `\nocite{*}` to display the non-cited publications as well.

You can display a frame with a colored background and a huge text in the center using the command `\framecard`.

For example, you can write:

```
\framecard{A SECTION\\TITLE}
```

This will display a frame with a orange background and the phrase "A SECTION TITTLE" in the center. You can also use a custom color with `\framecard`:

```
\framecard{A SECTION\\TITLE}
```

```
\framecard[UmUGreen]{A SECTION TITLE\\  
WITH A CUSTOM COLOR}
```

You can see the results of the commands above in the following slides.

A SECTION TITLE

A SECTION TITLE
WITH A CUSTOM
COLOR

You can display a frame with a background image using the command `\framepic`. The image will be **adapted vertically** to fit the the frame.

For example, you can write:

```
\framepic{graphics/darth}{  
\framefill  
  \textcolor{white}{Luke,\\I am your supervisor}  
  \vskip 0.5cm  
}
```

Alternatively, to make the background 50% transparent, you can write `\framepic[0.5]{graphics/darth}...`

You can see the results of the commands above in the following slides.

Luke,
I am your supervisor

A full-page background image of Darth Vader from Star Wars. He is shown from the waist up, wearing his iconic black helmet and cape. He holds a glowing red lightsaber in his right hand, which is positioned diagonally across the frame. The background is a smoky, greyish-white with a red, flame-like effect on the left side. Overlaid on the image is red text that is right-aligned and semi-transparent.

Right-aligned text with
Semi-transparent background

We provide two other bonus commands:

pdfnewline you can use `\pdfnewline` to avoid the annoying `hyperref` related warnings when using newlines in the document's title, author, etc. For example, in this presentation the author is defined as:

```
\author[Luke Skywalker]{  
  Luke Skywalker, Ph.D.  
  \pdfnewline  
  \texttt{luke.skywalker@uniud.it}  
}
```

marker you can use `\marker` to highlight some text. The default color is `pink`, but you can also `use a custom color`. For example:

```
\marker{Default color}  
\marker[UmUGold]{Custom Color}
```

`framefill` you can use `\framefill` to put the text at the bottom of a slide by filling all the vertical space.
